

From procurement to delivery – manage your business with one integrated solution

CCC Pinnacle Yard Management™ Solution

Buying and selling recycled auto parts can be challenging, especially when you're working from technology that has been pieced together.

It should be easier.

It is with the CCC Pinnacle Yard Management™ Solution. It's the only solution that integrates key components—sales, e-commerce, parts inventory, management, logistics and production—into one package.

Productivity

Streamline your production with the CCC Pinnacle Yard Management Solution's order manager, including a shipping and routing module that facilitates the order process from the point of sale to the final delivery, while providing you with easy to use tools for delegating and assigning tasks to help get parts to your customers faster.

Flexibility

Our control center dashboards and order wizards are configurable to give your staff the information that is most important to their job function, while collecting a wide-range of data that can help you make important business decisions.

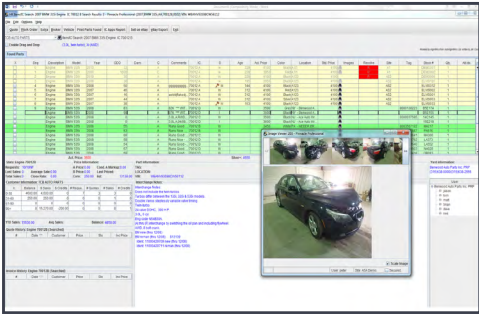

Accessibility

Delays in updating your inventory and sales activities can lead to lost revenue and inefficiencies. The CCC Pinnacle Yard Management Solution shows information in real-time and provides visibility into the parts buying process so you know whether a part is available.

Extended Sales Channels

It helps to have more ways to sell parts. With PinnacleNet™ Network, a parts trading network that is embedded in the CCC Pinnacle Yard Management Solution, you can keep your trading partners connected and update them on inventory in real-time. As parts are sold, deleted, inventoried or changed, your PinnacleNet trading partners are updated.

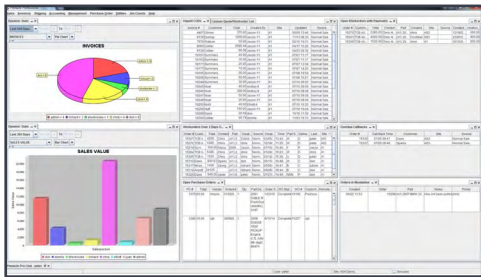

Because the CCC Pinnacle Yard Management Solution is integrated with the CCC TRUE® Parts Network, estimators using CCC ONE® Estimating can access your parts inventory. Estimators are electronically linked to your real time inventory, enabling them to view available parts, request quotes, create purchase orders and receive invoices with a few simple clicks.

With PinnacleNet, Pinnacle's embedded parts trading network, you can keep your Pinnacle trading partners connected and in real-time.

Activity Log

The CCC Pinnacle Yard Management Solution keeps track of user activities as they work throughout the system, including part history, order history, vehicle history as well as customer and account history. Actions are tracked and logged in the system, allowing for accountability.

Our control center dashboards and order wizards are configurable to give your staff the information that is most important to their job function.

Reporting

The CCC Pinnacle Yard Management Solution includes comprehensive reporting tools to help recyclers make the decisions necessary to effectively run their businesses. This includes a multitude of reports which help you make more informed decisions about your inventory and improved efficiencies and the productivity of your business.

CCC Pinnacle Yard Management Solution is the sole-endorsed yard management software by the United Recyclers Group.
